

DURATION: 5 HOURS

COMPLETE THE TASKS LISTED IN THIS DOCUMENT USING ARTIFICIAL INTELLIGENCE (AI) TOOLS/AI Agents

Evaluation Criteria (Read this, Very Important)

Evaluation Criteria

The evaluation process will focus on the quality of each deliverable outlined in this document. The effectiveness of AI tools and agents, as integrated across each activity, will be a primary consideration.

Every deliverable should be comprehensive, presented in a professional manner, and show clear completion.

Maintain a comprehensive record of all prompts utilized for the creation of various deliverables. Ensure that you are logged into your tool during use so prompt history remains readily accessible.

Key Areas of Assessment

- **Comprehensive Application of AI:** The use of AI for creating deliverables
- **Impactful Implementation:** Evaluators will look for clear evidence of how AI technologies have positively influenced activity
- **Deliverable Quality and Completeness:** Each deliverable must be thoroughly developed, meeting all specified requirements with high quality and completeness.
- **Innovative Approach:** Out-of-the-box thinking will be valued, especially in the creation of deliverables. For example, submitting a status report in HTML format instead of the traditional Word document or PPT format will be considered innovative.

INDICATIVE LIST OF AI TOOLS THAT CAN BE USED

The list above is just a suggestion—you may select any AI you discover through searches or other methods. Please make sure to use your personal ID to log in, not your TCS official email ID.

AI-Assisted Operations Excellence – Participant Exercise Workbook

All the deliverables are expected to be of production-level quality, ensuring excellence in both content and look & feel.

This workbook is to be used by participants to complete the exercises. For all sections, participants must **synthetically** create the required input data using Approved AI tools. No input documents, emails, transcripts, Excel sheets, or process notes will be provided. Participants are responsible for generating realistic, business-appropriate synthetic inputs, validating them, and then producing the required outputs.

Each exercise clearly mentions the ****total marks allocated****. Evaluation will be based on overall quality of thinking, appropriateness of synthetic inputs, correctness of outputs, and clarity of articulation.

1. Common Instructions for All Participants

- Participants may choose any one function or process from their own team.
- All source inputs must be synthetically created using AI; no real employee, customer, project, or confidential data should be used.
- Outputs should be professional, reusable, and business ready.
- Participants may use documents, spreadsheets, email drafts, flow diagrams, presentations, voice-over videos, or simple visuals.
- The focus is on clarity, usefulness, structure, and business value, not on technical complexity.

2. Exercise Set (100 Marks Total)

Exercise 1: Professional Email Response (Total: 10 Marks)

Context: Assume a realistic workplace email scenario in your function and create the input email synthetically using AI.

Example scenarios / themes:

- Admin: Room booking conflict, travel desk escalation, visitor pass delay
- Talent Development: Training nomination rejection, certification request clarification
- HR: Joining-date clarification, policy question, grievance acknowledgment
- Internal IT: Access request delay, laptop issue, software installation escalation
- Delivery Excellence: Audit data request, compliance reminder, overdue status update
- Resource Management: Allocation conflict, skill mismatch, release date clarification

Task: Draft a professional, accurate, and context-aware email response to the synthetic email.

Participant Deliverables:

- Synthesized email input
- Final email response

What will be assessed:

- Professional tone
- Correct understanding of issue
- Clarity of response
- Appropriate next steps / closure

Exercise 2: Meeting Transcript to Knowledge Document (Total: 15 Marks)

Context: Assume an online internal meeting in which a new process, policy, initiative, service, or operational change is explained. Create a synthetic meeting transcript using AI.

Example scenarios / themes:

- New onboarding process
- New training nomination workflow
- Revised leave approval process
- New device request process
- Updated quality review cadence
- New resource allocation governance

Task: Convert the synthetic transcript into a structured knowledge document that can be reused for onboarding, training, or future reference.

Participant Deliverables:

- Knowledge document (Word, HTML or equivalent)
- Short training walkthrough video / narrated presentation / screen-recorded explainer

What will be assessed:

- Ability to extract relevant knowledge
- Structure and readability
- Reusability for future team members
- Accuracy and completeness

Exercise 3: Spreadsheet + Email Snippets to Weekly Functional Status Report (Total: 15 Marks)

Context: Create a synthetic spreadsheet-like dataset and 3–5 supporting email/message snippets using AI for a weekly operations review.

Example scenarios / themes:

- Admin: Requests closed, pending facilities issues, travel bookings, visitor requests
- Talent Development: Training enrolments, completions, certification status, pending approvals
- HR: Joining pipeline, employee queries, pending documentation, policy escalations
- Internal IT: Tickets opened/closed, aging issues, device requests, access requests
- Delivery Excellence: Audit observations, quality metrics, review closures, compliance status
- Resource Management: Demand received, allocations completed, open positions, bench movement

Task: Consolidate the synthetic spreadsheet data and email snippets into a weekly status report suitable for leadership review.

Participant Deliverables:

- Weekly progress summary
- Key metrics and insights
- Issues and risks
- Next-week action plan

What will be assessed:

- Ability to interpret multiple inputs
- Meaningful summary of metrics
- Quality of risks/issues articulation
- Leadership-friendly presentation

Exercise 4: Process Document / SOP Creation (Total: 25 Marks)

Context: Assume you have been asked to formally document a business process currently handled by your team.

Example scenarios / themes:

- Admin support request handling
- Training nomination and completion tracking
- Employee onboarding support
- IT access provisioning
- Quality review and audit follow-up
- Resource request fulfilment / staffing support

Task: Create a formal process document or SOP using AI, along with a simple process flow diagram.

Participant Deliverables:

- Process objective and scope
- Trigger / start condition
- Step-by-step process flow
- Roles and responsibilities
- Inputs, outputs, and controls
- SLAs / timelines (if applicable)
- Exception scenarios
- Simple flowchart / swim-lane style diagram

What will be assessed:

- Completeness
- Logical sequencing
- Practical usability
- Clarity of controls and exceptions
- Visual representation of process

Exercise 5: Process Re-engineering for Efficiency (Total: 15 Marks)

Context: Use the SOP created in Exercise 4 as the baseline process.

Task: Analyze inefficiencies in the current process and propose a re-engineered version that improves speed, simplicity, consistency, or user experience.

Participant Deliverables:

- Identified pain points
- Root causes / inefficiencies
- Re-engineered process description
- Efficiency improvements
- Automation opportunities
- Risks / dependencies of change

Examples of improvement themes: Fewer handoffs, Reduced email dependency, Better templates/checklists, Clearer approvals, Standardized intake forms, Dashboards instead of manual follow-ups, Automated reminders or status tracking

What will be assessed:

- Quality of pain-point analysis
- Practicality of future-state proposal

- Relevance of efficiency improvements
- Realistic automation suggestions

Exercise 6: Presentation of Re-engineering Findings (Total: 20 Marks)

Context: Assume you are presenting your findings to function heads or leadership reviewers.

Task: Prepare presentation content that summarizes the current-state challenges, re-engineered process, expected benefits, and implementation considerations.

Participant Deliverables:

- Current-state overview
- Problem statement
- Pain points / inefficiencies
- Future-state process
- Expected benefits / business impact
- Implementation considerations
- Recommended next steps

What will be assessed:

- Executive communication quality
- Storyline and flow
- Relevance of business benefits
- Practicality of rollout approach

3. Suggested Domain Menu for Participants

To maintain a general challenge, each team may choose a process or use case from their own area. The examples provided in the table below are for reference only; you are welcome to create your own example or use case.

Team	Sample Use Cases / Domains
Admin Team	Travel desk, visitor management, meeting room booking, facility request handling, transport coordination, asset handover coordination
Talent Development Team	Training nominations, course completion tracking, certification support, learning calendar publishing, nomination approval workflow
HR Team	New joiner onboarding support, employee document collection, leave/policy clarification, internal movement support, employee query handling

Internal IT Team	Access provisioning, software installation request, laptop issue management, password reset support, hardware replacement workflow
Delivery Excellence Team	Review tracker management, audit observation closure, quality compliance follow-up, governance reporting, dashboard consolidation
Resource Management Team	Demand intake, allocation tracking, release planning, skill mapping, staffing conflict resolution, utilization follow-up

Complexity Guardrails (to help non-technical teams succeed)

- Email scenario: 1 incoming email + 1 response
- Meeting transcript: 1 meeting, 2–4 speakers, 10 pages maximum
- Weekly report input: 15–30 rows of synthetic spreadsheet data + 3–5 email snippets
- SOP: 6–10 process steps
- Re-engineering: 4–6 pain points + 1 improved future-state flow
- Presentation: 5–7 slides
